

A local Gemma agent gets authority through SatGate.

No standing API key. Scoped capability on check-in. Gateway-only actions. Spend limit, audit lineage are enforced and visible.

Govern the agent. Govern what it can delegate.

Local Gemma / Ollama
model emits intent only

SatGate
issues scoped capability

Gateway
meters, blocks, audits

Bottom line: every agent call is identified, scoped, metered, audited, and revocable.

economic firewall for agents
